

Crystal Wong-A3 Proposal

I want to make a website where one can either draw by numbers and save their canvas screen as a jpg image, or they can draw their own image and save it as well. So, similar to that of microsoft paint.

Or something where there is a pile of lego blocks on the screen and one can build stuff out of it. Or there is already a virtual lego structure and the user can deconstruct it and remake it again using blocks from a selection box or from the existing blocks that are on the screen.
